

Craig Barton

TES Maths Adviser and creator mrbartonmaths.com and diagnosticquestions.com

'My sessions are always hands on, practical, fun, cliché-free and make use of the ideas and resources that I have found successful in my own classroom and with my own students. My aim is always the same: to leave teachers with things they can use in the classroom tomorrow, together with strategies and approaches that will last a lifetime. Without wishing to blow my own trumpet, the evaluations and feedback I receive are always outstanding, and I work hard to provide sessions that will have a long-lasting positive impact for those involved.'

Craig Barton
